Rayyane AGUIRI

My main objective is to be able to program a front end website using HTML, CSS, Bootstrap, the 3 programming languages that are the basis of all websites, and Javascript too, and to know how to use Github and Git by performing several git command lines.

For this, I decided to create an e-commerce website that requires a lot of work to project myself into the real world of companies that create e-commerce sites and not make a simple site. Personally, I find that this project is difficult than the first,

Regarding the Github part, Here is the link to access my project :

<https://github.com/AGUIRI/CPSC222-Project2-RayyaneAguiri>

Here is a table that summarizes everything that is done:

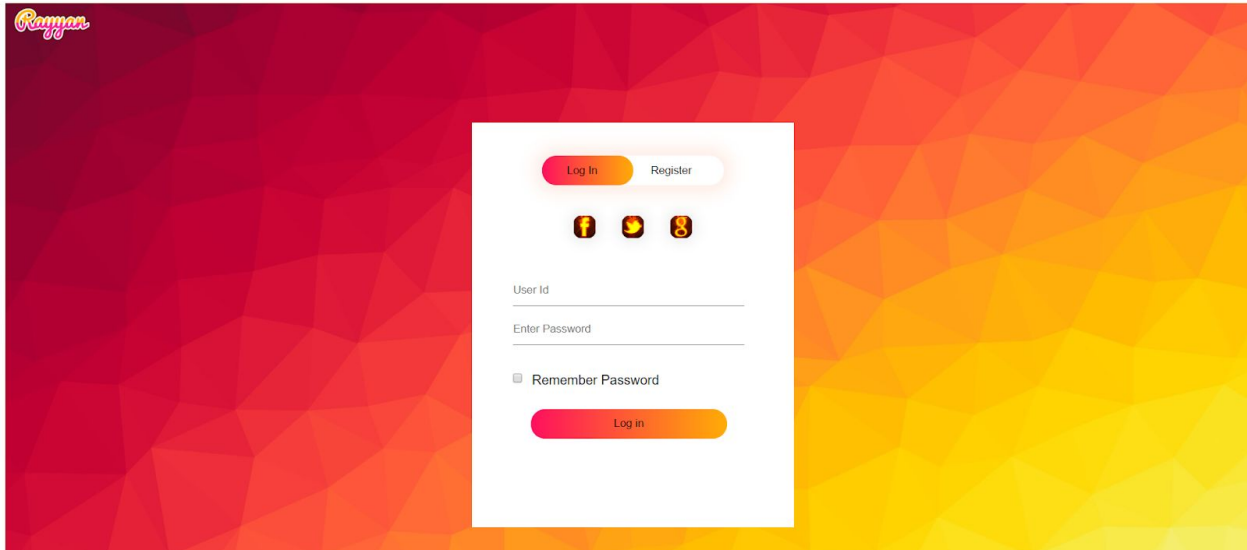

Commits	Reason	Date
Commit 1	First Commit	03/25/2020
Commit 2	add images	03/25/2020
Commit 3	add pagesHTML	03/25/2020
Commit 4	add pagesCSS	03/25/2020
Commit 5 +6	Change contactHTML+Slide Settings	03/25/2020
Commit 7+8	Slide Settings 2 +images+Changes contact HTML + Add Jumbotron	03/25/2020
Commit 9	Add Caption to slide	03/24/2020
Commit 10	Add Modals	03/24/2020
Commit 11	Switch Modals in CartHTML	03/24/2020
Commit 12	Add button Switch Color	03/24/2020
Commit 13	Add Breadcrumb	03/24/2020
Commit 14	Last Commit "Add journal"	03/10/2020

In addition, I have not encountered any difficulty with the git commands.

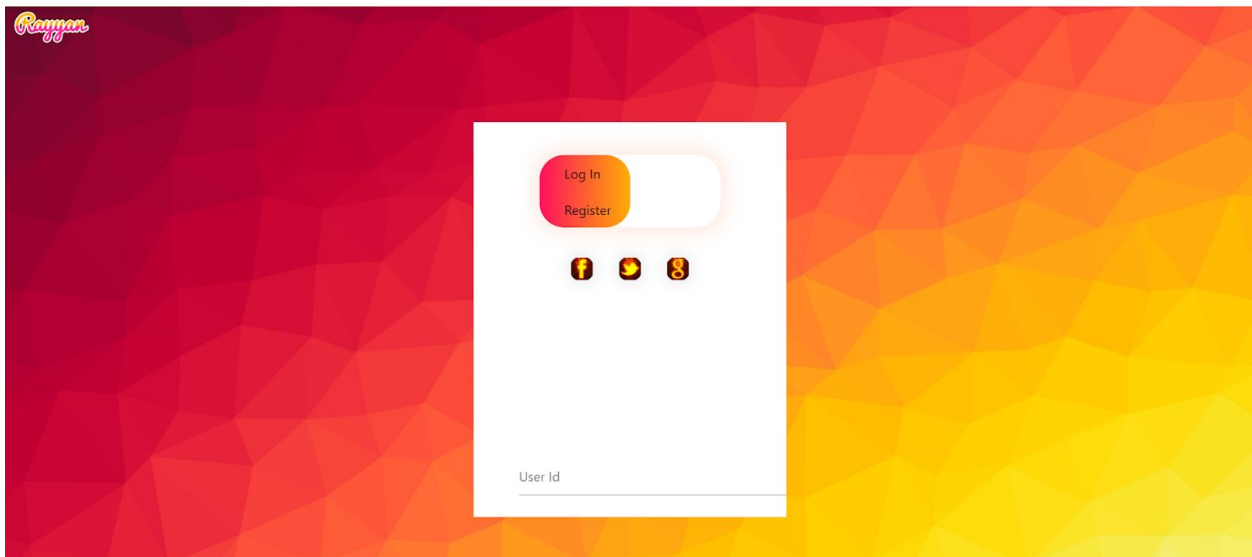

I found difficulties regarding the Contact page and the login & Register page, the problem is that when I add the link to Bootstrap, I lose all the design of my pages, which caused me Difficulties in the programming of buttons and Breadcrumb. for example the Login page in normal state:

1. [Home](#)  
2. login And Registration

and if I add the link to Bootstrap:

[Home](#) / login And Registration

In conclusion, I am satisfied with my project because in this step, I can see that the programming of a website is getting better and better as because on the other hand to enrich my knowledge in HTML & CSS...In this project, I made 12 pages which contains a home page, login & Register page, cart page, contact page and 8 pages for different products, and in addition to that I used Bootstrap to have a better design.

I had in the past weeks a lot of obstacles which delayed me to make my project quickly (as I told you in the mail), but in the end, I managed to make a good website.

The only thing I wanted to do but unfortunately I do not have the knowledge to do it: it is to have a database and to link it with my site, for example to have access to our profile with the page Login & Register.
